

## For all those who want more

Yamaha has developed three GYTR kits (Genuine Yamaha Technology Racing) for those who want to get even more out of the Ténéré 700 World Raid. The easy-to-install performance kit consists of a rally seat and a set of new footrests. The GYTR ECU, the Akrapovic full titanium exhaust system and the air filter increase engine performance. The handling kit replaces the standard wheels and suspension elements of the World Raid. Finally, the Rally Kit includes a range of high-end rally accessories, including high-capacity fuel tanks, a genuine rally steering kit with fairing screen, which enables the installation of roadbook instruments, high-performance headlights and all the necessary components required for participation in Raid competitions.

The kits were developed exclusively for racing purposes. Some parts will also be available separately for the standard version of the Ténéré 700. (aum)
